

Student Answer Sheet

Demo sheet — answers intentionally out of order and of mixed quality

Answer — Q5

The water cycle is the continuous movement of water between the Earth's surface and the atmosphere. Water evaporates from oceans, lakes and rivers, then cools and condenses into clouds. It later falls as precipitation such as rain. Some water collects in rivers, lakes and oceans and the cycle repeats. The main stages are evaporation, condensation, precipitation and collection.

Answer — Q1

Photosynthesis is the process by which green plants make food using sunlight, carbon dioxide and water. Chlorophyll helps capture light energy and glucose is produced, with oxygen released. It is important because it provides food/energy for the plant.

Answer — Q4

An operating system basically runs the computer and helps us use applications. It manages things in the computer. Two responsibilities are managing files and managing memory.

Answer — Q2

Newton's second law says that when more force is applied an object moves faster. The formula is $F = ma$.

This answer is intentionally vague/incomplete for grading tests.

Answer — Q3

Renewable energy is energy that is good for the environment and non-renewable energy is energy that can be bad. Solar energy is renewable and coal is non-renewable.

This answer has examples but the explanation is intentionally weak and imprecise.
